

## **What's in your yard – Tangent Membrane treated water or something else?**

### **Safest Water**

The Tangent LandSaver® MBR turns domestic and commercial wastewater into high quality water that is safe to discharge right to the surface or re-use in non-potable applications such as irrigation.

### **Don't Risk a Failed Septic System**

The Tangent system utilizes a membrane biological reactor (MBR) with an Ultrafiltration solids removal barrier that consistently prevents contaminants from overflowing into the dispersal system and yard. This overflow, common in other systems, causes system plugging and inspection failures. Failed systems cost thousands of dollars to upgrade or replace.

### **Not Your Average System**

Most systems are rated using average performance data which discounts that contaminants are discharged during heavy water usage. The LandSaver® MBR never allows contaminants to overflow. Field test data shows fecal coliform is consistently not detected, total suspended solids are less than 1 mg/l, and cBOD is less than 5 mg/l. The system removes 99.9999% of viruses and exceeds stringent California Title 22 Reuse Water Requirements.

**The Tangent LandSaver® MBR produces water that protects property owners, their neighbors and our environment.**

### **About Tangent Company**

*Tangent is an innovator in on-site, domestic and commercial water treatment. Our technology encompasses a full range of solutions for treating wastewater whether for discharge of high quality effluent, one-time reuse applications, or complete closed-loop recycling for non-potable and even drinking water use.*
